

# Power Generation

**Turbine control servo valves for fossil, nuclear, gas, hydro, and wind generated power. Steam control servo valves.**

Star will shortly be in a position to supply valves intrinsically safe certified with double or triple coil redundancy. We not only supply new valves but direct replacements for most popular valves used in the industry. These are already in service both in the United Kingdom and worldwide to Sweden, Saudi Arabia, and Egypt. New valves have been supplied as far away as China and Taiwan.

**Our facility has Intertek approval for the supply of ATEX Electro-Hydraulic Servo Valves used in Potentially Explosive Atmospheres such as GE & Mitsubishi gas turbines,**
