

Rolling Mills

Hot and cold rolled steel, aluminium, copper, strip, coils, plate.

Primary metals producers are demanding users of Star Hydraulics servo valves. Whether it is electrode positioning on an electric arc furnace or automatic gauge control on the rolling line, Star Hydraulics servo valves are used extensively for the production and processing of steel, aluminium, and copper etc. Operations in challenging conditions using manipulator arms and coil handling for example, needs precise, repeatable and reliable performance. Star Hydraulics world renowned repair service is also available to many large equipment manufacturers worldwide such as casting and forging companies.
